2

## Our Story

Our journey commenced in 1986 when El-Lawendy for Industry and Trading emerged as one of the pioneers in importing and distributing UPVC pipes in Egypt, coinciding with the transition away from the traditional steel piping system

In 2006, we diversified our operations to include the importation and production of top-quality building materials, chemicals, and raw materials sourced from various countries worldwide

Today, we stand as leaders in the production of premium UPVC profiles for window and door systems. Premier UPVC represents the pinnacle of quality and innovation in the Egyptian market. Our commitment to excellence coupled with our extensive product range and compatibility with various systems, is a testament to our generations of expertise

## Our vision

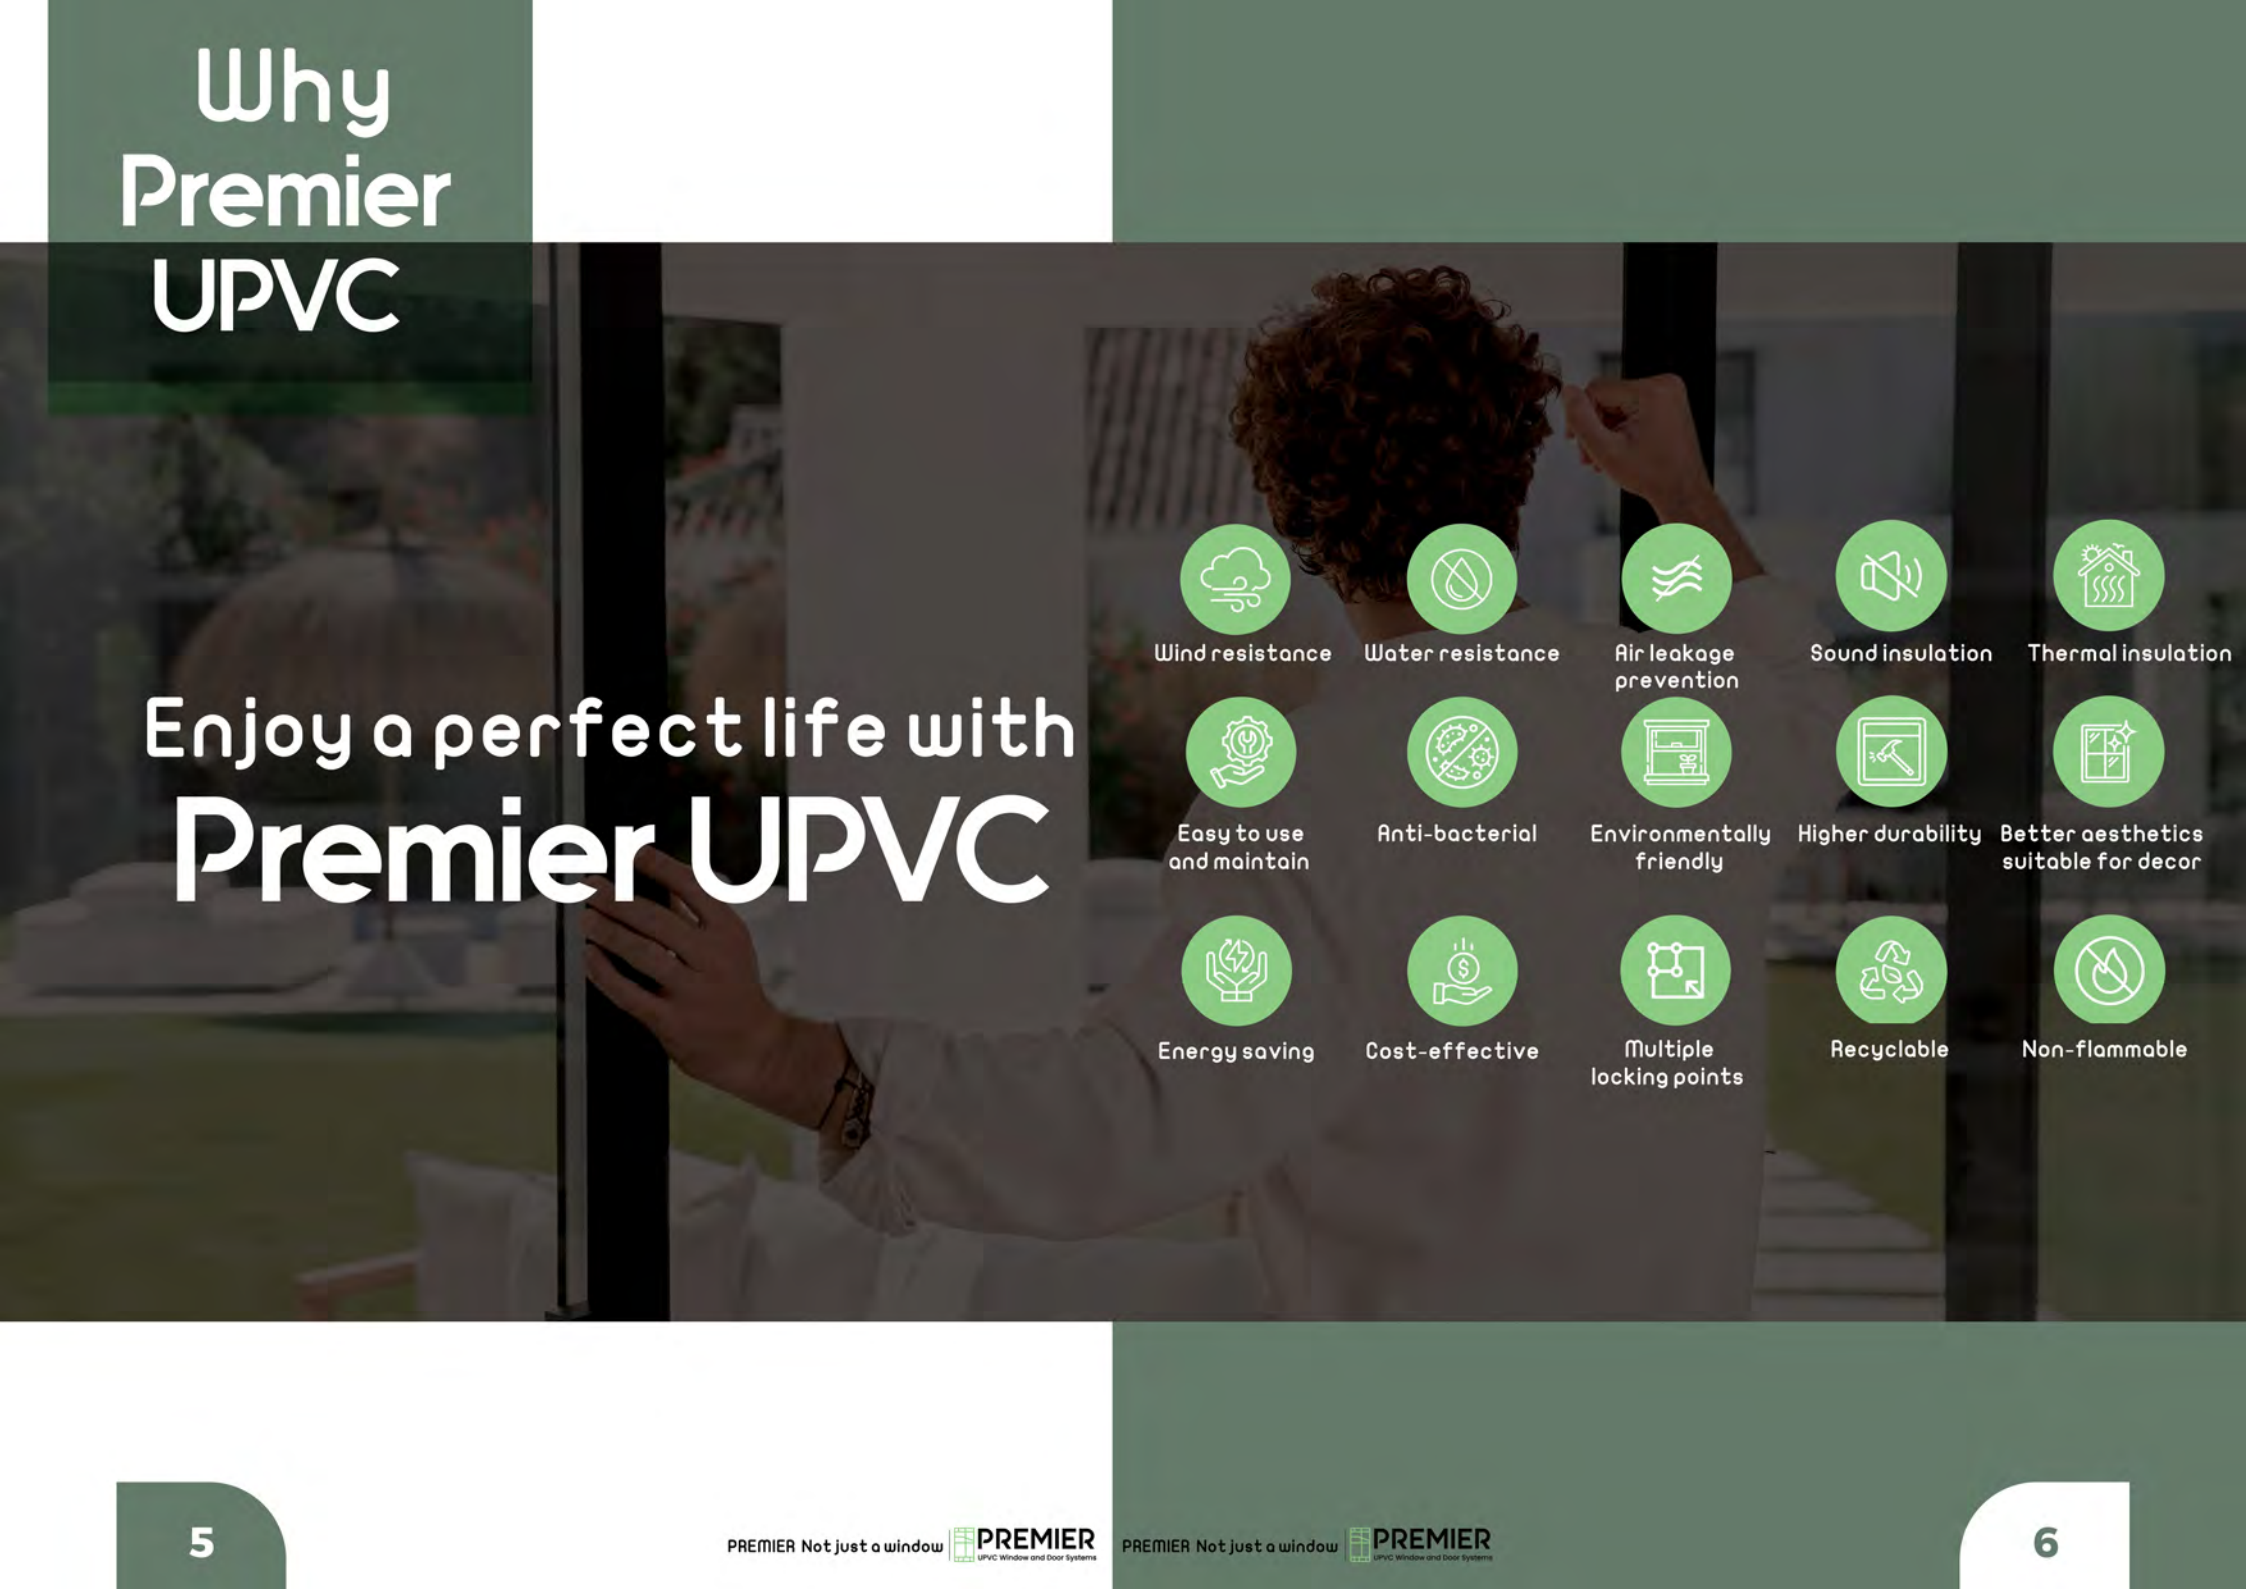

We strive to be the largest company in the field of manufacturing UPVC doors and windows in Africa and the Middle East, and to always be the first choice for customers in the local and international markets

## Our mission

Premier" is an industrial company specialized in manufacturing UPVC door and window profiles. It also distinguishes itself by providing services for managing the manufacturing and installation processes of doors and windows in projects. The company aims to provide added value to the industrial sector, customers, and employees through innovation, sustainability, leadership, and community service

# Why Premier UPVC

Enjoy a perfect life with  
**Premier UPVC**

- 
- Wind resistance
  - Water resistance
  - Air leakage prevention
  - Sound insulation
  - Thermal insulation
  - Easy to use and maintain
  - Anti-bacterial
  - Environmentally friendly
  - Higher durability
  - Better aesthetics suitable for decor
  - Energy saving
  - Cost-effective
  - Multiple locking points
  - Recyclable
  - Non-flammable

## Air Leakage

When measuring the amount of air passing through a unit area per hour, the quantity measured through a Premier UPVC window is significantly less compared to a traditional window due to its unique welded frame system

## Wind Resistance

Most issues and defects that occur with windows due to strong winds are a result of using low-quality windows. Premier UPVC windows are much stronger thanks to their multi-chamber systems and frames reinforced with steel.

## Water Insulation

Even a small amount of water can cause significant damage to a home's interior. Premier UPVC windows prevent water from seeping through corners due to their unique full-weld system and specially designed frames that expel water.

## Thermal Insulation

Premier UPVC windows efficiently maintain cold or hot air inside the room and prevent it from entering from the outside.

This is achieved through a sealing system and multi-chamber design and performance can be further enhanced by using thicker or insulated glass.

## Sound Insulation

Premier UPVC windows provide excellent sound insulation by using special UPVC accessories and rubber seals between the frames ensuring a more pleasant and comfortable interior space.

## Easy to Use and Maintain

UPVC material requires minimal maintenance compared to traditional wooden or metal windows, maintaining its appearance and functionality over a long period without warping, rotting, or corroding.

## Safety and Security

These windows are equipped with multi-point locking systems, enhancing home safety and making it difficult for intruders to break in. UPVC windows are often reinforced with galvanized steel, which increases their structural strength and provides extra protection against impact.

## Longer Lifespan

UPVC windows are designed to last for many years, often outlasting other types of windows. They are also UV-resistant, preventing fading and deterioration of the material over time.

Premier UPVC window and door systems enhance the security of your home

## Energy Efficiency

UPVC windows are excellent insulators, helping to maintain indoor temperatures and reduce energy consumption for heating and cooling.

## Antibacterial Properties

Some UPVC products are treated with antimicrobial additives during the manufacturing process, providing an extra layer of protection against bacteria. The antibacterial characteristics of UPVC make it a practical and hygienic choice for windows and doors, particularly in environments where cleanliness is essential.

## Fire Resistance

UPVC windows often meet strict safety and fire resistance standards, making them a safer choice for buildings concerned with fire safety. They feature self-extinguishing properties and have a high melting point, enhancing their fire resistance.
